

DeThink

Design Thinking for Entrepreneurial Education

The DeThink project is proud to announce the completion of its first project result, with exciting results to share. DeThink aims to optimize secondary school teachers' self-efficacy by providing state-of-the-art training in design thinking, innovation, and entrepreneurship. Through a comprehensive toolkit and curriculum, DeThink equips teachers with the tools and knowledge to foster an entrepreneurial mindset, critical thinking, and creativity among their students.

What We've Achieved So Far?

Desk Research: We have conducted extensive desk research to identify the most effective methodological approach and contextual factors for integrating design thinking, innovation, and entrepreneurship in secondary school education.

Focus Groups: With the purpose of gathering insightful opinions, we conducted focus groups with **29 teachers** from Turkey, Spain, and Ireland. This has helped us shape our training approach and tailor it to the needs of secondary school teachers.

Survey: We have conducted a survey with **129 participants** from Ireland, Turkey, and Spain to gather additional data and insights. This has allowed us to further refine our curriculum and toolkit based on the feedback received.

Curriculum and Syllabus: We have developed an extensive curriculum and syllabus that covers the most suitable methods for secondary school instructors as a result of our study, focus groups, and survey. Our curriculum includes ideas from design thinking, innovation, and entrepreneurship and offers instructors a systematic strategy for implementing design thinking in the classroom.

What's Next?

With the completion of our first project result, DeThink is now moving ahead with the development of our toolkit, which will provide secondary school teachers with practical resources and guidance on how to implement design thinking, innovation, and entrepreneurship in their classrooms. We are also developing digital learning environment for teachers to further enhance their skills and self-efficacy in fostering an entrepreneurial mindset, critical thinking, and creativity among their students.

Join Us in Disseminating Our Results!

We invite you to join us in disseminating our results and spreading the word about DeThink. Share our leaflet with your networks, colleagues, and stakeholders to help us create awareness about the importance of design thinking, innovation, and entrepreneurship in secondary school education.
